

# Syntax-driven semantic composition: Combination

Umut Özge

COGS 543: Computational Semantics  
METU, Informatics

# Principle of Compositionality

↓  
The meaning of an expression is a function of the meanings of its parts and the way they combine.

↗  
→ combinatory process

→ combinations = syntactic structure

process vs. structure

Ruled out: ((black machine) coffee)

black, coffee, machine

1. ((black coffee) machine)

2. (black (coffee machine))

~~3. (black coffee machine)~~ X due to A1

Assumptions

1. Combine two items at most — in a single step.

2. Combine only adjacent items.

a b c

(a b c)

((a b) c)

(a (b c))

a b c d

$(a((b c) d))$

1. → first combine b and c.

→ then combine the result with d

→ then combine the result with a.

2. → i. first combine a and b

→ ii. then combine c and d

iii. combine the result of i with that of ii.

$((a b) (c d))$   
Combinations

3. i. comb. c and d.

ii. " a and b.

iii. " p<sub>i</sub> with p<sub>ii</sub>

$((a b) (c d))$

a b c d

(b c)

[(b c) d]

(a [(b c) d])

a b c d
